

Experienced front end dev with a love for simple, useful and beautiful technology.

Hampus Ahlgren

An accomplished front end developer, who has built websites since CSS was the new hot thing. I've got a strong sense of self motivation and a responsibility for the final product. I've got what it takes to grow an idea into something amazing.

Abilities

- Strong practical knowledge of the design and development process of websites.
- A great drive to always improve myself - both personally and professionally.
- Over 7 years of experience of what it takes to actually ship something, orchestrating the many parts of web development into one final product.
- A love for the learning of new technology and new ways of working.
- A life-loving, tech-idealizing attitude. I love to learn from others and engage in discussions about tech and the world at large.

My Work

I have experiences ranging from developing and launching my own creative projects to working in small teams developing large scale applications.

I have worked with the mobile web for over 4 years and know the ins and outs of all areas of webdevelopment.

All the links to the projects below can be found on my portfolio site: Ahlgren.co

Experience

HTML5	    
NodeJS	  
Mobile Web	   
AngularJS	    
UI/UX Design	   
Git	  

Qudini.com

Mar 2013 - Now

A virtual queueing system for Retailers and Restaurants

- Sole front end developer, developing and maintaining over 500k of Angular code.
- Responsible for developing webapps for desktop and mobile
- Learned a lot about rapid prototyping and developing maintainable code at scale

Piction.it

June 2012

A survey tool for creatives

- Responsible for all front end design and implementation, done in jQuery.
- Responsible for half of the backend development made in CodeIgniter, PHP.

Photic.me

Jan - July 2012

A feedback community for photographers

- Responsible for all front end development.
- Responsible for strategy decisions about the backend implementation, which was done in PHP CodeIgniter.
- Responsible for delegating implementation details of the backend, done in PHP CodeIgniter and Wordpress.

Strive

Jan 2013

A hybrid webapp for tracking habits

- Responsible for developing everything from the idea to the final implementation. Built in AngularJS for desktop as well as mobile.
- Learned a lot about designing for mobile.
